

Komatsu embedded resources

Optimal support for your business.

Komatsu have delivered in excess of \$200M in approved customer value to date, across multiple operations working on projects including; Payload Optimisation and Time Usage Optimisation / Delay Reduction.

Imagine having a mining specialist dedicated to the application and performance of your Komatsu machines - working directly in your operation or strategic project groups.

With Komatsu's Embedded Resources that is what you get.

We will place **highly skilled** and experienced **mining professionals** into your operation to ensure that your Komatsu equipment is being used in the most productive manner to your specific operation.

We do this through a pipeline of data driven, continuous improvement projects, to ensure that sufficient focus and attention is given to the bottlenecks that effect overall mining system performance.

Our **Mining Specialists** are fully integrated into your operation and utilise a variety of methods and

technologies to identify opportunities and manage projects to achieve the desired results. They utilise resources from across the greater Komatsu business, combined with local site based information and insights to implement cost saving solutions to return significant customer value.

Our Embedded Resources deliver best in class performance for your mining operations and are a key support to your own Continuous Improvement and strategic project groups.

Contact your local Komatsu branch to find out how we can help **support you**.
