SMART CONSTRUCTION
Field and Office

Get Real-Time Insights from the Field and Office

Say goodbye to pen and paper with Smart Construction Field — a mobile-first, connected system designed to simplify how you record, track, and manage job site activity.

Easily log costs and production data directly from the field. Gain near real-time visibility into operational performance and project progress. SC Field supports Bluetooth Low Energy (BLE) devices to automatically track machine hours across your entire fleet, regardless of brand, and uses geo-fencing to log employee hours accurately.

Success on the job site starts with one simple question: *Did we hit our targets today?* With SC Field, you can track tasks and the associated costs of labour, machines, and materials — all in real time — to confidently answer that question. Make smarter decisions faster by using live data to manage your spending and resources.

Use Smart Construction Field and Office independently or together. While each is powerful on its own, combining both unlocks seamless collaboration between the field and the office. Deliver real-time site data directly to project managers so they can make informed decisions without delay — reducing communication lag and controlling costs.

Stay on top of your job's progress

- Get clearer, more accurate job site data
- Easily track and analyse daily spending
- Monitor daily job site activity
- Manage fuel distribution by machine
- Make better-informed business decisions

Generate reporting and insights

Create daily reports to review all activity and information collected on the job site. Get a complete picture of what was aggregated each month, see daily site conditions, and view task progress broken down by labor, equipment, and materials.

See a connected view of your job site

Automate the collection of job site activity to more accurately manage the costs that arise each day. Smart Construction Field is OEM agnostic, collecting data from your entire fleet.

Safety and Equipment Prestart Surveys

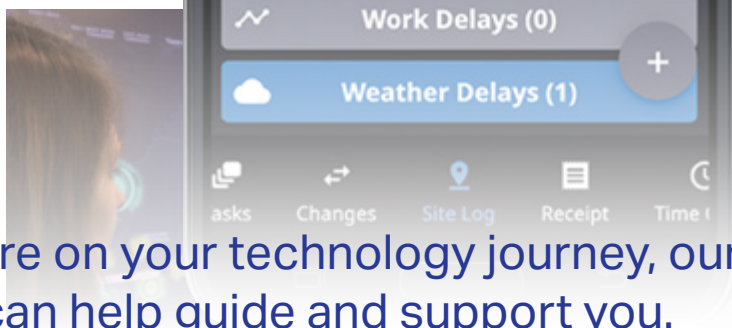

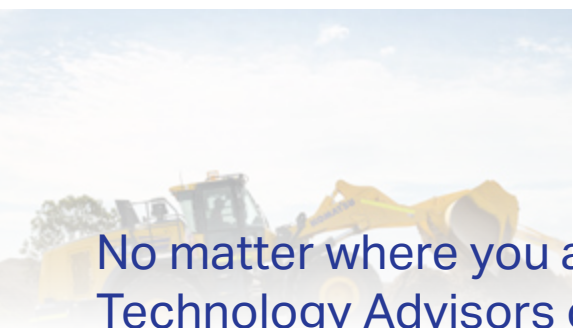

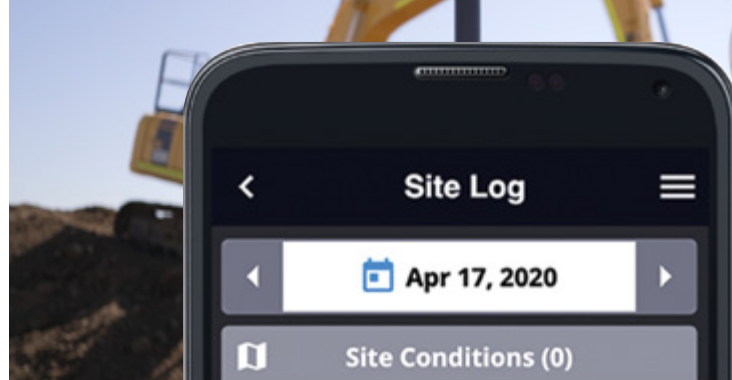

- Create your daily prestart checklists tailored to your site needs
- Build machine-specific prestart forms for accurate inspections
- Automatically send completed reports to OHS officers and plant managers
- Eliminate paperwork delays with real-time digital submissions

Project management

- Schedule your work with confidence
- Allocate resources and track your production and efficiency
- See near-real time progress reporting across multiple projects

No matter where you are on your technology journey, our Technology Advisors can help guide and support you.
